

OXBOW AT HOME

Amazing Amphibians

Wildlife Wednesday Reflection Questions

Premiered as Facebook Live Event on Wednesday, April 1st at Noon (EST)

Question 1:

What is metamorphosis? Draw the life cycle of a frog (and compare it to your pre-visit drawing).

Question 2:

What do most adult amphibians eat? What type of “eater” does that make them?

Question 3:

Can you define what it means for amphibians to have permeable skin?

Question 4:

How could water pollution affect an amphibian?

Question 5:

Amphibians are considered “bioindicator species,” which means they can “tell” scientists if their habitat is healthy or polluted.

What does the word indicator mean? Use context clues to help you. Can you think of any examples of an indicator in your everyday life?
